

City of **HOBART**

The City of Hobart is aware of increased activity from a number of mobile-app based food delivery services in and around the city.

Council has initially taken steps to increase monitoring and vehicle surveys in North Hobart in order to identify a solution for all stakeholders, including those business owners that use and those that don't use such services, the delivery drivers, and other precinct customers.

Within the scope of Council's responsibilities a number of other options are being implemented including:

- increased patrols during peak periods (between 6.00pm – 9.00pm);
- review of parking times to reflect peak night-economy usage;
- installation of vehicle detection sensors for remote monitoring;
- traffic management communication with Tasmania Police; and
- creation of a dedicated layover zone in Condell Place for the delivery drivers

The City of Hobart has also written to other interstate Councils and the mobile service providers in relation to concerns raised by the community, and will be following up with further correspondence.

Whilst we seek to accelerate the implementation of some of these measures, other sustainable solutions will require additional time and consultation to implement.

During this period we will remain in contact with and consult the North Hobart Traders Association.

We ask for your patience during this period and welcome your ongoing feedback.
